

Collection and Storage of Seeds

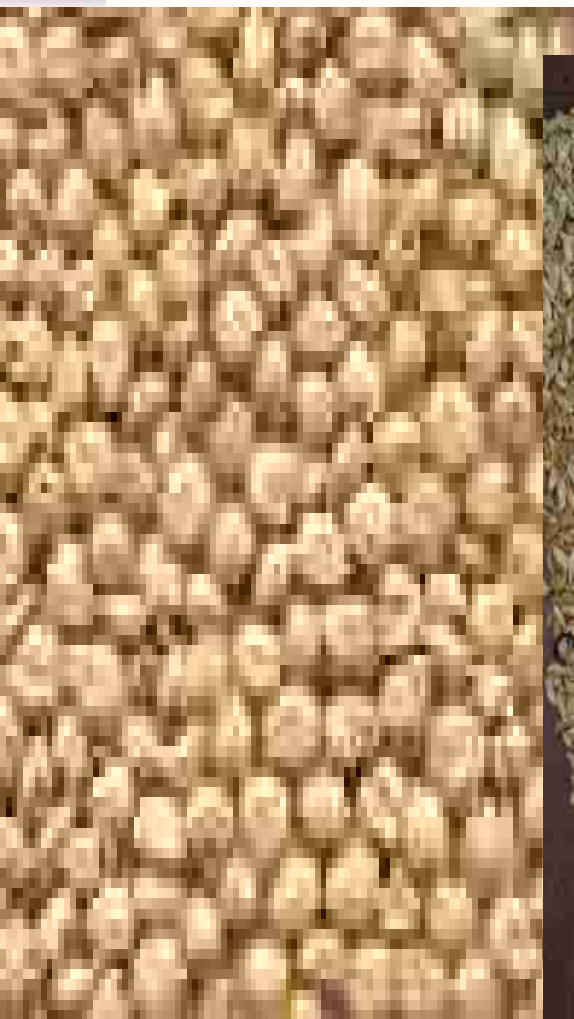

- Ms. Alka Najan

Paithan Taluka, Aurangabad
Maharashtra

Institute for Integrated Rural Development

Seed Storage and Preservation

- ◆ Seeds – Wheat, Sorghum, Maize, Pearl Millet, Pigeon Pea, Green gram.

System of Seed Production

- ◆ Identify ten healthy plants in each row.
 - Plants that have not been infected by diseases
 - Not attacked by insects
 - Greater resistance
 - timely bud and flower stages
 - Greater yield
- ◆ Tie black or red ribbons on selected healthy plants.

Storage system

- ◆ Keep seeds away from pests and infected plant materials.
- ◆ Dry under the sun if seeds contain moisture
- ◆ Neem leaves, wood ash, red soil, clove, ghee, garlic, cowdung, cow urine can be used for seed treatment.

Seed Storage

- ◆ Apply ash on seeds and store in mud pots

Seed Storage

- Use Neem leaves for preservation of seeds.

Seed Storage

- ◆ Store the seed pots one above the other

Community Seed Bank

- ◆ Community seed banks are established in 7 cluster villages where relevant records and information on seeds are available.

Thank you.
