Why Eco-Sarjan

● *The Need*

Today environmental concerns have crossed the coffee table discussions boundaries and have entered realm of our daily experiences. Scorching heat trapped in concrete jungle or seeming unbalanced seasons brings green house effects live to us. Our kids no more hear singing sparrows. Never in the past there has been such an alarming need to be proactive. Fortunately, there seems to be positive response to this call from all walks of society.

SUSTAINABILITY has become the key word cutting across our decisions as a consumer or user.

Business community and manufactures have responded to these changing consumer needs by offering a range of products that are eco friendly and disaster resistant. Today having green and disaster resilient building combined with sustainable neighbourhood management solutions is rapidly becoming one of the key criteria for decision makers.

Thus it is the need of current market to have a forum that bridges the gap between Eco friendly and Disaster Resistant Habitat Solution providers and seekers. With this as a core concern, **Society for Environment Protection** in partnership with **Devdhar Trade Expo Pvt. Ltd.**, is coming up with the event

'Eco-Sarjan.'

National Level Policy Advocacy workshops on

- Inclusion of cost effective alternate construction technology in specification
