## Mainstreaming biodiversity conservation in River Yamuna: Major findings and future potential

**Khem Bahadur Bhadauria, Sanjeev Kumar Yadav and Asghar Nawab**

**World Wide Fund for Nature – India**  
**172-B, Lodi Estate, New Delhi - 110003**

# Why Yamuna?

## ‘Ailing River’

Widespread ignorance and lack of understanding about the conservation needs of the river ecosystem

A deep sense of alienation, hopelessness and helplessness amongst the riparian people as regards any effort to revive the river to its past glory

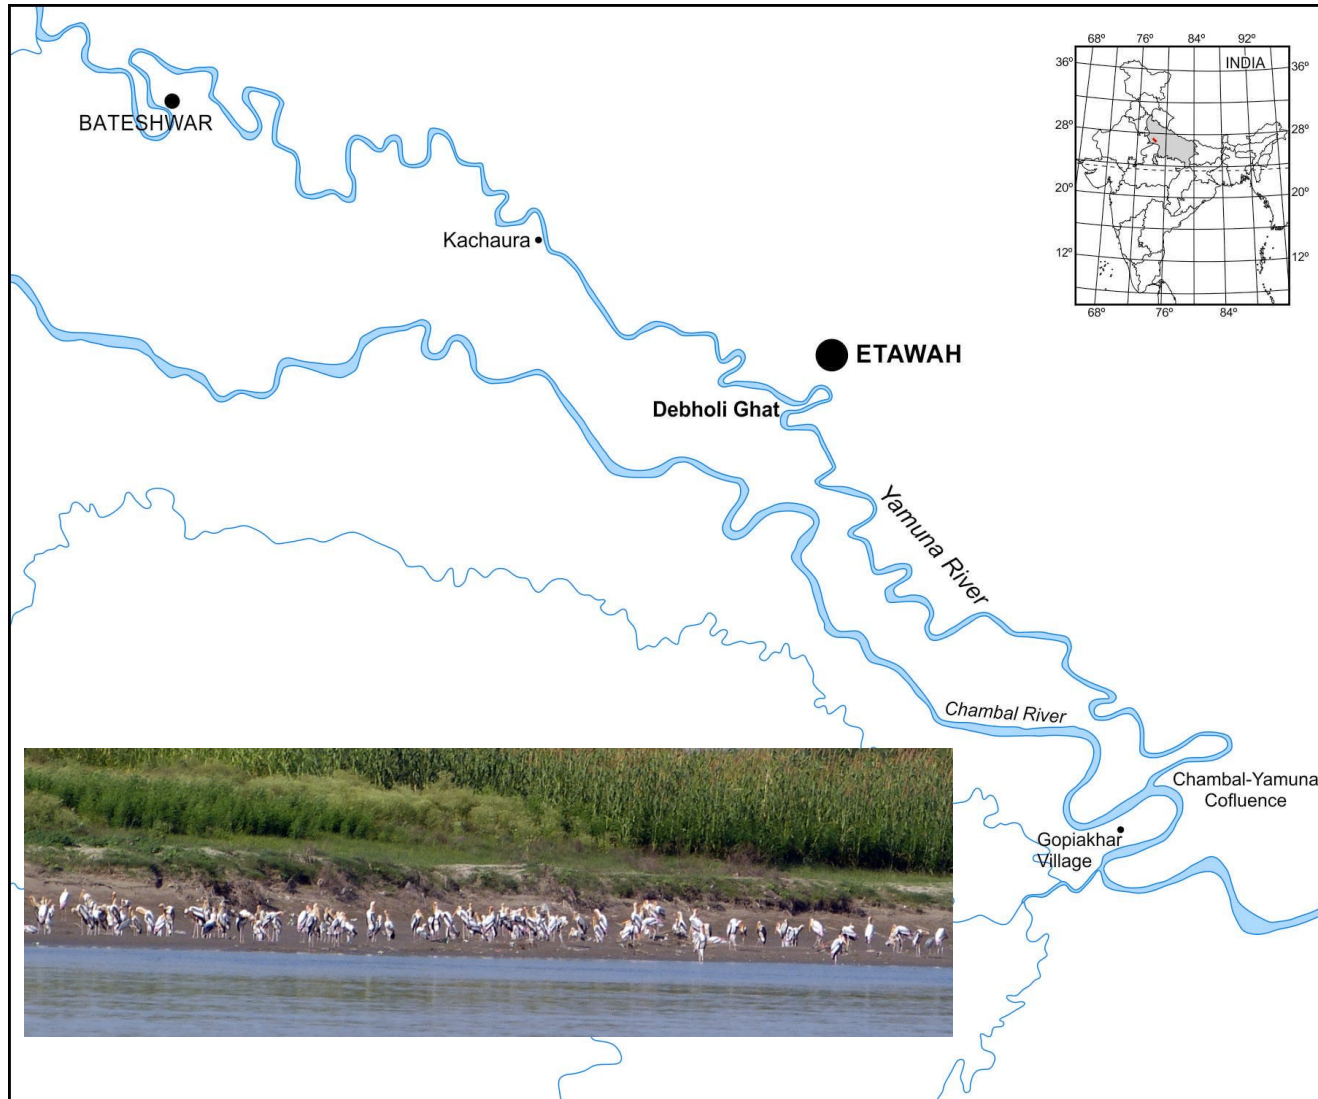

## ‘The silver lining’

A concept of ecosystem restoration vis-à-vis  
Biodiversity Conservation

Bateshwar Ghat [Agra]

**Project site: c. 194km [Bateshwar Ghat, Agra to Dibholi Ghat, Etawah]**

## Project objectives

Record faunal diversity and document threats to habitat quality

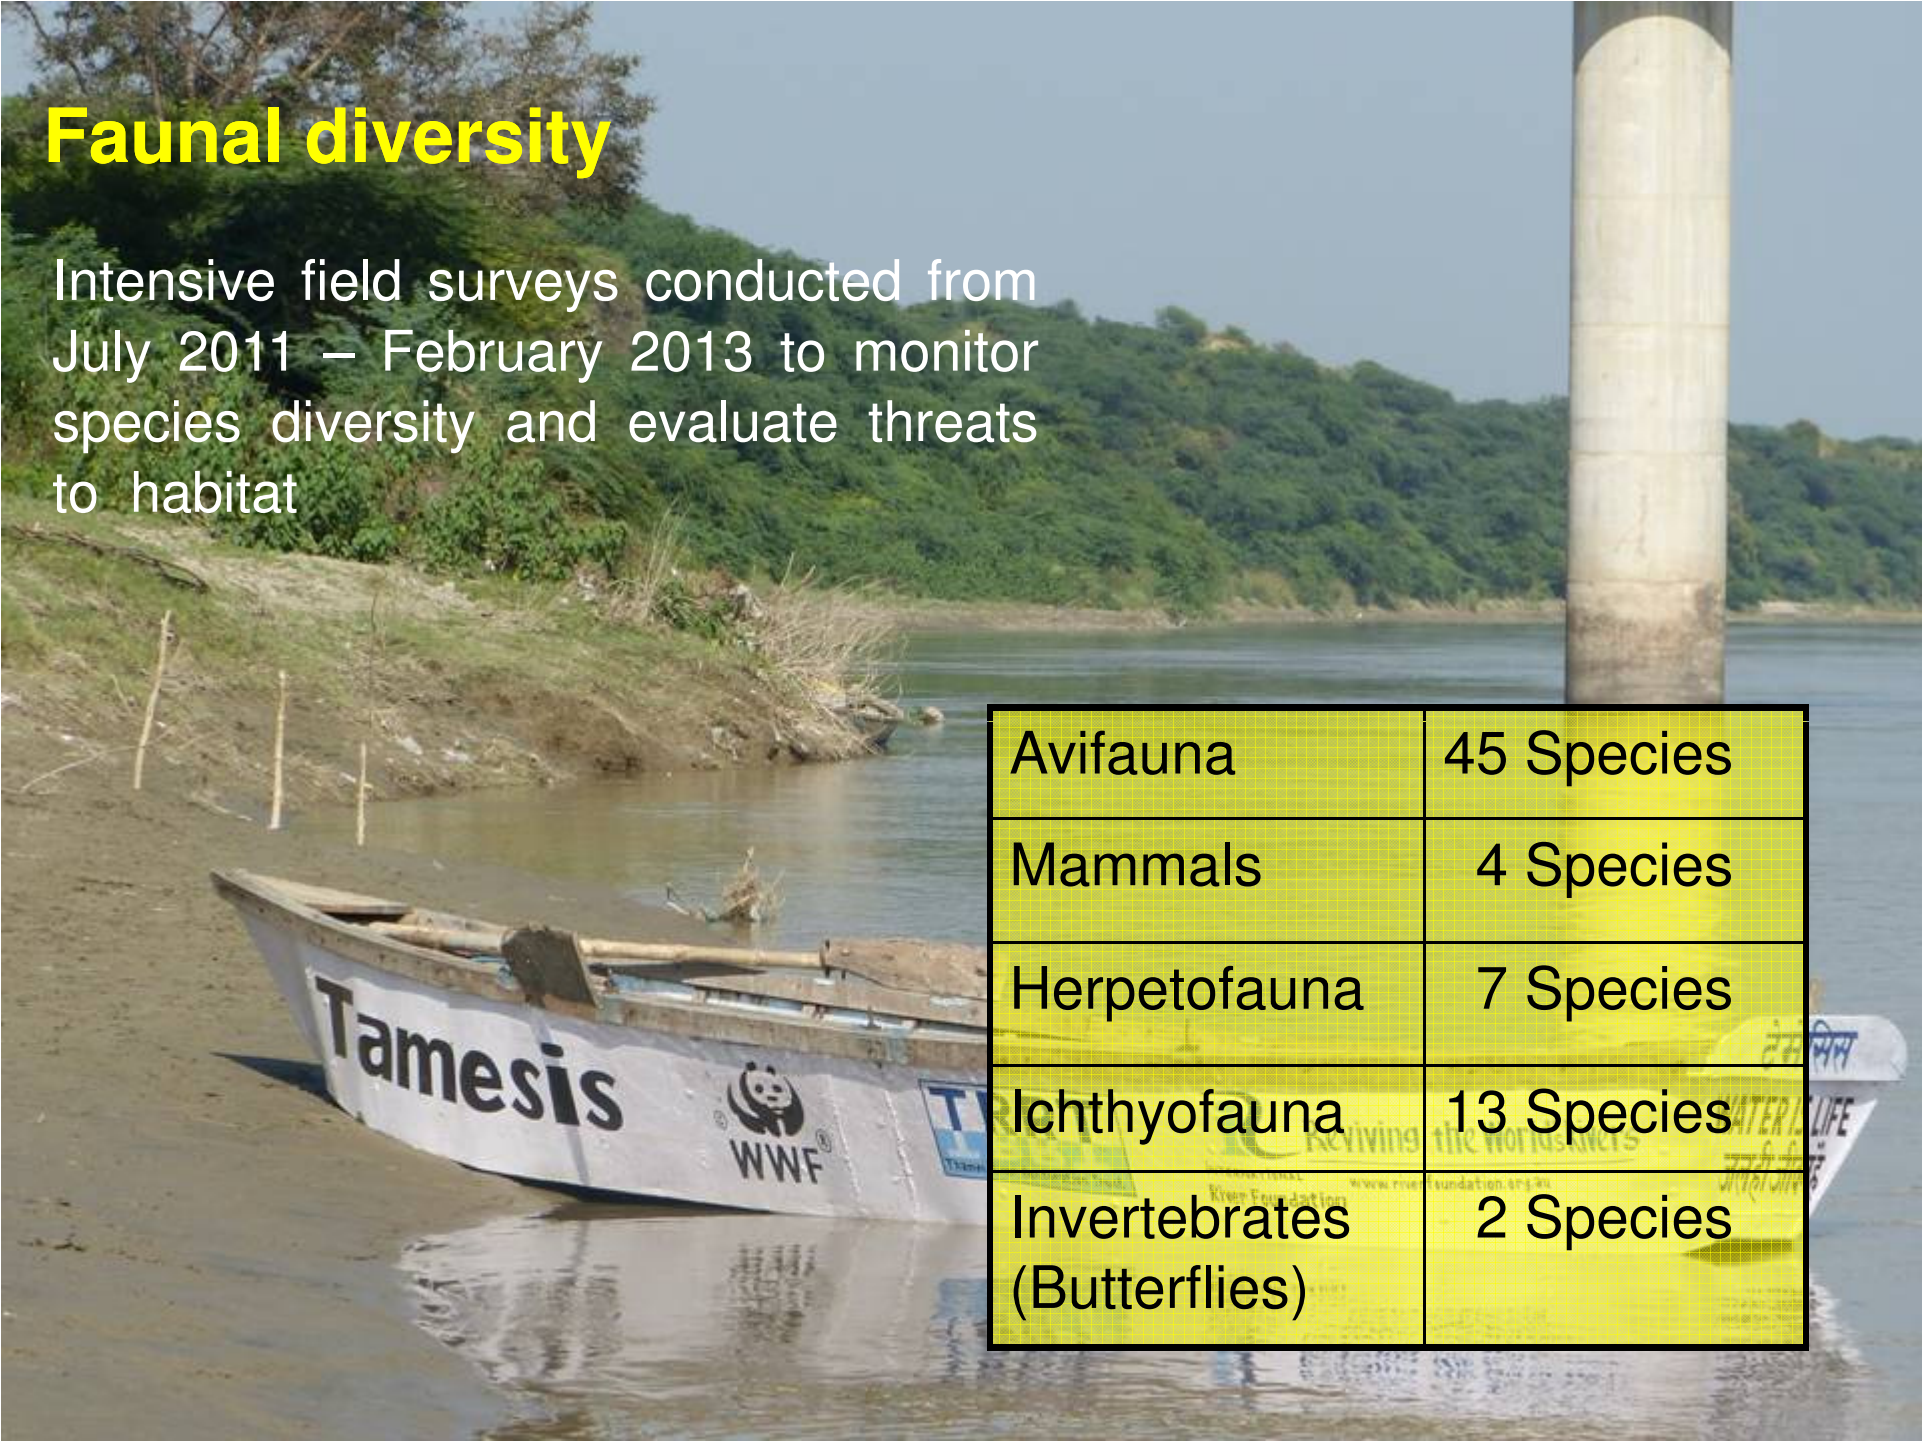

Assess dependency of riparian communities on natural riverine resources and evaluate people's perception towards biodiversity conservation

# Faunal diversity

Intensive field surveys conducted from July 2011 – February 2013 to monitor species diversity and evaluate threats to habitat

Avifauna	45 Species
Mammals	4 Species
Herpetofauna	7 Species
Ichthyofauna	13 Species
Invertebrates (Butterflies)	2 Species

45 species of birds recorded

Small population of  
Ganges River Dolphins  
observed near  
Pathewara village  
(Hamirpur Grid)

Female Gharial recorded with about 18 hatchlings - This is first record of Gharial 'nesting' in River Yamuna

4 species of turtles recorded

13 species of fishes recorded

# Conservation threats

Fish die-off

July 2012

August 2012

October 2012

# Resource dependency

10% of 320 villages [n=32] comprising of 3187 households surveyed in the study stretch (combining both northern and southern banks)

Other Backward Class are dominating Communities that include Mallah, Aheer, and Lodi

River bed agriculture [*Palaze*] is extensively done, subsidiary income is made through selling of handicrafts at local market

Fishing is largely on contract basis, though locals also fish for personal consumption

Infrastructural capital includes 09 Panchayat community meeting rooms, 24 Aganwadi Centre for women, 1 Health Centre, 09 Ration Shops, 12 Government Primary Schools, 09 Government Junior Schools and 1 Government Inter College

Socio-economic surveys conducted to understand the dependency of the riparian communities on freshwater resources

## Fisheries protection and restoration workshops to promote alternative livelihood at Gopiakhar Village, Etawah, Uttar Pradesh

Fisherman sharing his experience and thoughts about the project with other participants.

Indigenously made machines for spinning rope and jute material.

Products made out of *Munj*.

## Workshop on promotion of Better Management Practices to develop more efficient agricultural practices by promoting use of vermi-compost for *Palaze* [riverbed cultivation] at Gopiakhar Village, Etawah, Uttar Pradesh

ITEM	Chemical Fertilizer	Vermi-Compost
Plot size (m <sup>2</sup> )	20x20 = 400	20x20 = 400
Volume of manure used (Kg)	25 kg	78 kg
Time of crop	90 days	90 days
Productivity (Kg)	182	207
Quality of product	Short sized and dull texture	Long sized and bright texture
Local market value of product (INR)	22.00	25.00
Cost of manure	630.00	Nil*
Total Income (INR)	22.00 x 182.00 = 4004.00	25.00 x 207.00 = 5175.00
Total Income - Cost of manure	4004.00 – 630.00 = 3374.00	5175.00 – 00.00 = 5175.00

Difference (INR) in trial plot of 400 m<sup>2</sup> = 5175.00 – 3374.00 = 1801.00

\*2500/- One time investment for 5 yrs for maintaining a 10 x 3.5 ft Compost Pit

For a plot of 1 Acre (4046 m<sup>2</sup>) net benefit of approx. 18,010.00 for one season crop can be expected!

## ***Synthesis***

---

**Biodiversity conservation - inextricably linked to protection of habitat in terms of availability of prey and suitable sites for shelter - Key Biodiversity Areas (KBAs)**

**Biodiversity recorded represents endangered species like the Ganges Dolphin, Gharial and the Black-necked Stork**

**Peripheral areas of the National Chambal Sanctuary fall in the Yamuna which are used as seasonal migratory routes by endangered species like Gharial - such habitats maybe recognised/proposed as Conservation Units and effective protection measures are needed on urgent basis**

**Outreach Programmes included capacity building of Local Forest Staff and Technical assistance is being provided to the Forest Department in the development of a Biodiversity Conservation Action Plan for Yamuna**

**Riparian communities with stake in long term future of freshwater species and habitats across the region must be fully engaged in the development and conservation planning processes in order to assure the future sustainability of associated livelihoods and the ecosystem services provided by fully functioning freshwater ecosystems**
