An Overview

Water is a natural resource, fundamental to life, livelihood, food security and sustainable development. It is also a scarce resource. India has more than 17 percent of the world's population, but has only 4% of world's renewable water resources with 2.6% of world's land area. As per present estimate, India receives on average annual precipitation of about 4000 Billion Cubic Meter (BCM), which is its basic water resource. Out of this, after considering the natural evaporation- transpiration, only about 1869 Billion Cubic Meter (BCM) is average annual natural flow through rivers and aquifers. Due to spatial-temporal variations, an estimated 690 bcm of surface water is utilizable. Add to this 432 bcm of replenishable groundwater means, only about 1122 BCM is utilizable through the present strategies, if large inter-basin transfers are not considered.

Thus, the availability of water is limited but the demand of water is increasing rapidly due to growing population, rapid urbanization, rapid industrialization and economic development. In addition, there are inequities in distribution and lack of a unified perspective in planning, management and use of water resources. India's Union ministry is coming up with revised national water policy for the Improvement of water use efficiency, urban and rural water supply and sanitation. This revised policy will give a new opportunity to private players for implementation of new technologies in water supply and sanitation.

Water is required for domestic, agricultural, hydro-power, thermal power, navigation, recreation, etc. Utilisation in all these diverse uses of water should be optimized and an awareness of water as a scarce resource should be fostered. The Centre, the States and the local bodies (governance institutions) must ensure access to a minimum quantity of potable water for essential health and hygiene to all its citizens, available within easy reach of the household.

Objectives

The objective of "Water management in India-2012" conference to help understand new policies, and updates on National Water policy, increasing water use efficiency by 20% bring policymakers and stakeholders on a single platform, understand existing and potential opportunities under PPP and other possible solutions.

We will also discuss about the water supply and sanitation on an efficient manner for benefit of all. Water management in India 2013 Conference will bring platform for water treatment service providers for health safety through latest technologies. Above all, we would like to be a platform for solutions in a developing water market.

Target Audience

- Water resources department
- Department of Drinking Water
- Public works department
- Municipal Corporation
- Pumps manufacturers
- Water sanitation Service providers
- Piping Services Providers
- Industrial water users
- Consultants
- legal Services Providers
- Bulk water suppliers
- Research and academic organizations
- Urban local bodies
- Government bodies
- Policymakers and regulators
- International and national development agencies
- Financial institutions
- Wastewater treatment companies
- Public and private investment entities
- Technology providers, Etc.

Agenda/ Technical Session

Policy review & Water Management in India

- Review of Revised water policy-2012 & JNNURM project
- Improvement of water use efficiency under National Water Mission
- Government policies and projects for water management
- New initiatives from Integrated Water Resources Management and River Basin Organizations

Drinking Water meeting demand & treatment technologies

- Technologies for pipeline
- Water use measurement- Metered Water Supply
- Water Treatment Technology
- Membrane Technology for water treatment

Water Supply and sanitation

- Latest technologies for water supply and sanitation
- Strategies for rural & urban drinking water supply & Sanitation
- Municipal Water Supply and Sanitation Projects
- PPPs for water supply & Sanitation
- CPCB contribution to improving the functioning of sewage treatment

Water re-uses and waste water management

- Rain water harvesting for water security
- Public perspective towards water reuse
- Waste Water reuse as a part of water management Scheme
- Waste water purification & disinfection: chemical method wastewater

Panel discussion on Financing of water projects

- Financial assistance from government
- Need more active participation of Private institutions and banks
- Investment on water projects in water supply, sanitation and wastewater management and environmental issues.
- More investment on infrastructure - Promoting IWRM and Clean river

About IBK Media

IBK Media is a B2B Media having various activities in order to become the voice of global Business & our focused industry. IBK Media is creating a platform to spread the knowledge to best of the industry to understand Government policies, new business trends, new technology & it's Implementation in order to achieve Competitive advantage.

Our voice creates an impact to the industry to do business with enhanced efficiency, competitiveness etc. It provides expanding business opportunities for industry through a range of specialized services with authentic and timely information.

We believe in development of industry by global linkage, networking & training to enhance the efficiency of business, also IBK Media want to achieve the level of service which can change the benchmark in global business.

Registration Fee

Registration Fees	One	Two	Three	Four
Indian Delegates Add 12.36% Service Tax (ST)	₹ 10,000/- + ST	₹ 19,000/- + ST	₹ 27,000/- + ST	₹ 32,000/- + ST
Overseas Delegates (Inclusive Service Tax)	USD 500/-	USD 900/-	USD 1200/-	USD 1500/-
Note: Special Low fee for PSUs / PWDs / Municipalities / Academies INR 6,800/- (Per Participant)
